

Group velocity: the analytic U agrees with a derivative of our own phase curve to 0.006-0.09 m/s on smooth models

Tailings profile

Low-velocity zone (200 m/s at 20-40 m)

— $U = c / (1 + (T/c) dc/dT)$ from OUR own phase curve

— our analytic U (DISPER-80 eigenfunctions)

- - - disba GroupDispersion (agrees left, fails right)
